Database Merging status

Solange Delageniere

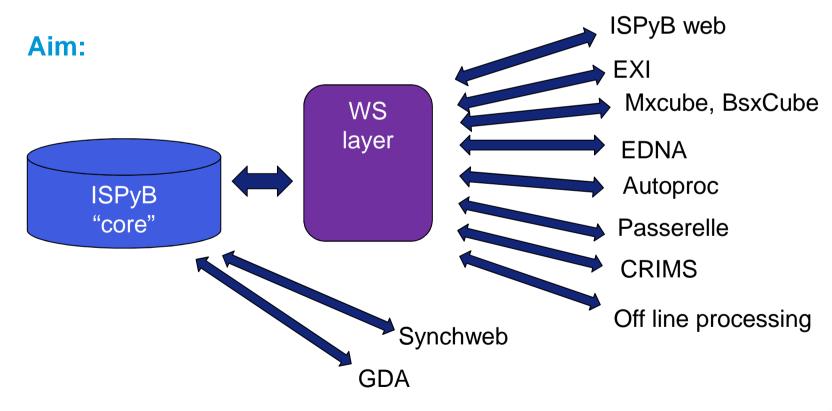

Database merging: why?

Database merging: why?

Scope: MX centered → may evolve?

Let the tables linked to other techniques as they are Saxs, Em, Tomo

Database merging: how?

Compare the schemas

Common tables

Think

1 by 1 : field by field

To keep or not to keep?

To add or not to add?

Database merging: plan

technique	table_name	comments	to add?	todo: May 20th		todo: June 6th		todo: June 12th	
	Aperture		no			will be dropped and aperture s DataCollection table	ize put in		
	BeamApertures	no data no part of official schema	no						
	BeamCentres	no data no part of official schema	no						
	BeamlineStats	no data no part of official schema	no						
	BF_xxx	Beamline faults tables:log book	no						
	BLSampleImage	LSampleImage		DLS Provides	documentation	ESRF might need it adapt the CRIMS, but the table need do	m to cumentation	1	
	BLSampleImageScore		?	DLS Provides	documentation	ESRF might need it		ESRF might need it	
	BLSampleType_has_con onent	DLS: why need of Many2Many?	?	ESRF not sure discussed	to use it has to be			BLsampleType will replace Crystal and Component will replace Protein	
	BLSession_has_SCposit	ion	yes	DLS provides	script	ESRF will add it		ESRF will add it	
	CalendarHash	DLS specific	no						
biosaxs?	Component	DLS will later change the Protein table name to Component, and add automatically entries in componentType type for old data	?					ESRF not sure to use it has to be discussed	
	Component_has_subTyp	not convinced MX datamodel shall be merged this more generic model	?					not convinced MX datamodel shall be merged this more generic model	
	ComponentSubType	ESRF not sure to use it has to be discussed	?					ESRF not sure to use it has to be discussed	
	ComponentType	describes the component for example protein, small molecule,	?					ESRF not sure to use it has to be discussed	
	Containerinspection		no						
	DataCollectionComment		?						
	DataReductionStatus		no						
	DewarRegistry		no						
	DHLTermsAccepted	users have to accept terms - I promise not to ship other things from DLS account -	yes			DLS To change it to CourierTermsAccepted and provide the script		ESRF will integrate it	
EM	EMMicroscope		no						
plates	Imager	formulatrix tray hotel - for plates	no						
	Inspection Type	•	no						
for MR	MXMRRun		yes	DLS to provide	a script	- ESRF to add			
for MR	MXMRRunBlob		yes	DLS to provide	a script	- ESRF to add			
gram		·	•					<u> </u>	
ermiceion I		le table linked to serGroup has Permission,		no					
hPsession sh		hould be outside the data model		no to be kept sepa		rativ			
		used a lot		yes		Il make study to see which a		and then simplify the project model accordingly, provide the creation scrip	
rotein_has_pdb				yes	DLS provides the	les the script		ESRF will add it	
obotAction				yes	DLS provides the script		ESRF will add it		
	Protein has pdb	1 11 00040		DLS provides t	the script ESRF will add it			1	
	RobotAction	+	yes yes	DLS provides		ESRF will add it			
	Schedule	equivalent to CRIMS	no	DLS provides t	ine script	LOAT WIII aud It			
	ScheduleComponent	equivalent to CRIMS	no			1		 	
	Screen	equivalent to CRIMS	no	1					
	ScreenComponent	equivalent to CRIMS	no	1					
	SessionType	equivalent to China	?					not sure ESRF needs it , all info is stored in SMIS and avoid duplicating data. To be discussed with collaboration.	

Database merging: in progress...

Initial status

Total nb of tables: > 100

Common tables: 48, but several missing fields

technique	table_name	comments	to add ?	todo: May 20th	todo: June 6th	todo: June 12th
	Aperture		no		will be dropped and aperture size put in DataCollection table	
	BeamApertures	no data no part of official schema	no			
	BeamCentres	no data no part of official schema	no			
	ReamineStats	no data no part of official schema	no			
	BF xxx	Reaggine faults tables (on book	00			
	BLSampleImage	Committee and annually soon	?	DLS Provides documentation	ESRF might need it adapt them to CRIMS, but the table need documentation	
	BLSampleImageScore		2	DLS Drovides documentation	ESRF might need it	ESRF might need it
	BLSampleType_has_comp onent	DLS: why need of Many2Many?	7	ESRF not sure to use it has to be discussed		BLeampleType will replace Crystal and Component will replace Protein
	BLSession has SCoopition		yes	DLS provides soriet	ESRE will add it	ESRE WILMHIT
	CalendarHash		00			
		DLS will later change the Protein table name to Component, and add automatically entries in componentType type for old data	?			ESRF not sure to use it has to be discussed
	Component_has_subType	not convinced MX datamodel shall be merged this more generic model	?			not convinced MX datamodel shall be merged this more generic mode
	ComponentSubType	ESRF not sure to use it has to be discussed	?			ESRF not sure to use it has to be discussed
	ComponentType	describes the component for example protein, small molecule,	?			ESRF not sure to use it has to be discussed
	Containerinspection		no			
	DataCollectionComment					
biosavs?	DataReductionStatus		no			
	Dewarflegistry		no			
	DHLTermsAccepted	users have to accept terms - I promise not to ship other things from DLS account -	yes		DLS To change it to CourierTermsAccepted and provide the script	ESRF will integrate it
EM	EMMicroscope		00			
	imager	formulatrix tray hotel - for plates	00			
plates	Inspection Type		no			
br MR	MXMRRun		Vest	DLS to provide a sortot	- ESPF to add	
ty MR	MXMRR unRinb		ves	DLS to provide a soriot	. ESRE to add	
for EM	Partide		00	DCD to provide a sorge	- 234 6 6 6 6 6	
oo con	PDB	Inked with protein has pdb	2			
	PDB entry	publish pdb linked with data recorded - probably for managem?	?			
	PD8Entry_has_autoProcPr		?			
	Permission	role table linked to UserGroup has Permission,	no			
	PtPsession	should be outside the data model	no	to be kept separatly		
	Project tables	not used a lot	yes	DLS will make study to see which ones are used	and then simplify the project model accordingly, provide the creation scripts	ESRF will implement the simplifie model afterwards
	Protein_has_pdb		yes	DLS provides the script	ESRF will add it	
	RobotAction		yes	DLS provides the script	ESRF will add it	
	Schedule	equivalent to CRIMS	no			
	ScheduleComponent	equivalent to CRIMS	00			
	Screen	equivalent to CRIMS	no			
	ScreenComponent	equivalent to CRIMS	000			
	SessionType	200	?			not sure ESPF needs it, all info is stored in SMIS and avoid duplical data. To be discussed with collaboration.

Quite some work to be done ...

Discuss

Database merging: discussions

Ex: "We would like some new tables/fields"

OK to add the "easy" ones:

add new fields in existing tables, when these new fields can be null as long as we have the update scripts:

- externalld columns

OK in some cases

When the new field is a foreign pointing to an existing table, and agreement.

To be discussed later → meeting

When the new fields are foreign keys pointing to new tables.

Some new tables where we think we need to have a discussion about them.

Database merging: merged items

December 2016

Total nb of tables: 125 / 133

Common tables: 79 very small discrepancies

DLS extra tables: 54, 13 for xi, 4 for perm, 12 for BF, 11 for

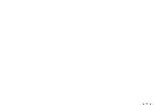

project

ESRF extra tables: 45 for BioSaxs, 1 for admin

Remaining points:

DataCollection table

Links to tables outside the "core" -> foreign keys to external tables

Database merging: links to tables outside the "core"

Solution 1:

Do not add foreign keys fields, not add extra tables

pros: very clean on the "core" side, no empty tables

cons: the schemas are not really merged, and if we share the API we have to be careful so that it is consistent, have a API for the "core"and a API with the extra

field/table

Solution2:

Add the fields but not as foreign keys

pros: no need to add empty tables, but extra empty fields

cons: scripts to be run to redefine the foreign keys to use the site specific tables

Solution3:

Add all foreign keys with the extra tables linked

pros: schema merged

cons: the "core" may be huge with a lot of empty tables, and we have to check that

foreign keys pointing to empty tables do not raise errors.

Database merging: remaining items

Remaining points:

- DataCollection table
- Links to tables outside the "core" -> foreign keys to external tables
- Scope: Keep all or reduce and have a core? How to define the core?
- -> How to indicate tables from the core, and extra tables? prefixes? yes

Database merging: conclusion

Almost there!

->Track carefully the DB modifications
